

Control panels

Control panel is designed as the control and indication unit for remote control of the radio equipment.

PRIMA develops and produces the following types of the control panels:

- control panels (CP) for controlling radios, navigation systems, satellite tracker systems, etc (component of the controlled radio equipment)
- operator panels (OP) for intercommunication equipment controlling (component of the intercom system)
- radio control panels (RCP), designed as integrated CP and OP, and intended for radio communication system controlling

All the control panels have graphic color screens, state-of-the-art means for manual entry of the information, which ensure the control ergonomics.

Control panel configurations can be designed in compliance with the customer requirements
